Assignment No: - 2

1] What is difference betⁿ a file & directory in linux?

→ File contain data	While a directory organizes files.
Files have specific formats e.g. .txt .jpg	Directories can contain subdirectories.
Files are individual entities.	While directories are containers.
A collection of data	A container for files & subdirectories.

2] What is the use of absolute path vs. & relative path

1] Absolute path - unique path / useful scripting
Full path from root directory (/).

2] Relative path - ambiguous path
path relative to current directory.
working directory.
useful for navigation.

- What is the use of the `ls` command?
- lists files & directories in current directory.
 - `-l` option shows detailed information.
 - `-a` option shows hidden files.
 - can be used with wildcards (e.g. `*.txt`).

- What does the `.` and `..` represent in a directory?
- `.(dot)` : represent the current directory.
 - `..(dot)(dot)` - Represent the parent directory.

- What is the difference between `>` & `>>` in file redirection?
- `>` overwrites file contents.
 - `>>` appends to file contents.
 - used for output redirection.
 - important for logging & data accumulation.

- What is a hidden file in linux? How do you view them?
- files starting with a dot (`.`) hidden. View using `ls -a` command.
 - often used for configuration files.
